

```

(*)
  Create a one time pipe from chan1 to chan2:
  Read user profiles of the form profile( fstName, lstName, data )
  from channel chan1, selecting for those with
  lstName beginning with a letter between 'M' - 'Z' or 'm' - 'z'.
  Publish to channel chan2 records of the form
  candidate( lstName, fstName )

*)
from(
  e <- ( chan1 ? ( profile( fstName, lstName, _ ) ) )
  | mThruZ( e( lstName ) )
) chan2 ! candidate( e( lstName ), e( fstName ) )

```
